

HEARING SCREEN REPORT

Date: {{date_of_screening}}

Dear {{student_name}},

Your hearing screening results fell **outside the expected range** indicating that further testing may be beneficial. These findings do not necessarily mean there are any hearing concerns; however, we strongly advise follow-up with an audiologist and/or family physician to rule out any potential ear-related issues. Please bring a copy of your screening results to your healthcare provider for review during your evaluation.

Please note: screenings are a general tool used to identify potential concerns and should not replace full audiological evaluations. Early identification and management of hearing issues are important for overall health, communication, and quality of life.

Signs That May Suggest Hearing Difficulties:

- Trouble understanding or following conversations
- Difficulty hearing in noisy environments
- Frequently asking others to repeat themselves
- Turning up the volume on devices
- Ringing or noises in the ear(s)
- Speaking loudly or straining to hear others

If you would like further guidance on next steps or have questions about your results, please do not hesitate to reach out. Your health and well-being are important to us, and we are here to assist you in any way we can.
