

HEARING SCREEN REPORT

Student: {{student_name}}

Date: {{date_of_screening}}

DEAR PARENT(S)/GUARDIAN(S):

Class-wide hearing screenings were recently administered at the school, and the tympanometry test showed that your child's results **fell outside the expected range**, indicating a need for further evaluation. This does not necessarily mean your child has hearing difficulties; however, we recommend follow-up with an audiologist and/or family physician to rule out potential ear infections or hearing issues. Please provide a copy of the screening results to your chosen service provider for their review and consideration during your child's evaluation.

Please note: hearing screens should not replace regular audiological check-ups. They serve to identify children who may require further assessment. If at any point you have concerns about your child's hearing, we strongly advise discussing these with your doctor and/or requesting a hearing evaluation with an audiologist. It is important to have your child's hearing tested regularly— even a slight or temporary hearing loss due to wax build-up or an ear infection can significantly impact a child's speech, language, and ability to learn.

Signs That May Suggest Hearing Difficulties:

- Trouble understanding or following instructions
- Unclear speech
- Not responding to name or environmental sounds
- Frequent requests for repetition (e.g., saying, "What?" or "Huh?")
- Complaints of ear pain, ringing, or noises in the ear(s)
- Turning up the volume on the TV or music devices
- Speaking loudly or watching lips closely when listening to others
- Challenges with reading or academic progress

If you have any concerns or would like guidance on what to do next, please do not hesitate to reach out to us or your school. Your child's success and well-being are our top priorities, and we're here to help!
